FORWARDING SHEET

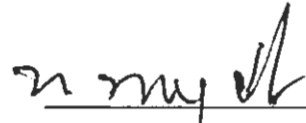

The thesis entitled "THE COMPARATIVE EFFECTIVENESS OF TEACHING ENGLISH GRAMMAR WITH THE HELP OF TEXTBOOK AND BY USING GROUP WORK ACTIVITIES" submitted by Aisha Bibi in partial fulfillment of the requirements for the Degree of Doctor of Philosophy in Education with Specialization in Teacher Education has been completed under my guidance and supervision. I am satisfied with the quality of student's research work.

Signature: _____

Name: Dr. M. Maqsood Alam Bukhari
Advisor

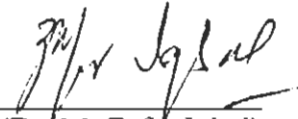

APPROVAL SHEET

The thesis attached hereto, entitled THE COMPARATIVE EFFECTIVENESS OF TEACHING ENGLISH GRAMMAR WITH THE HELP OF TEXTBOOK AND BY USING GROUP WORK ACTIVITIES prepared and submitted by Aisha Bibi in partial fulfillment of the requirements for the Degree of Doctorate of Philosophy in Education (Specialization in Teacher Education) is hereby accepted

(Dr. Maqsud Alam Bukhari)

Dean Faculty of Education
AIOU, Islamabad.

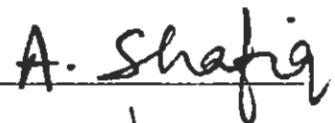

(Dr. M. Zafar Iqbal)

Chairman
Deptt. of Teacher Education
AIOU, Islamabad.

(Dr. Maqsud Alam Bukhari)

Advisor

(External Examiner)

(Senior Faculty Member)

IN THE
NAME OF ALLAH
THE BENEFICENT
AND
MERCIFUL MOST

**WITH
BLESSING OF ALMIGHTY ALLAH
AND
LOVE AND RESPECT
FOR
MY DEAR PARENTS

A SUCCESS**

ABSTRACT

Title: THE COMPARATIVE EFFECTIVENESS OF TEACHING ENGLISH GRAMMAR WITH THE HELP OF TEXTBOOK AND BY USING GROUP WORK ACTIVITIES

Pages: 189

Researcher: Aisha Bibi

Advisor: Professor Dr. Maqsood Alam Bukhari

University: Allama Iqbal Open University Islamabad (Pakistan)

Year: 2002

Subject Area: Teacher Education

Degree: Ph. D in Education

The problem under study was to investigate the comparative effectiveness of teaching English grammar with the help of textbook (deductive method) and by using group work activities (inductive teaching model). The study also attempted to see which of these two methods had a positive effect on the academic achievement of the elementary and secondary school students in Pakistan. The main objective of the study "To find the comparative effectiveness of teaching English grammar with the help of textbook (deductive method) and by using group work activities" was split into some sub objectives which dealt with the effect of the method on the academic achievement of the elementary and secondary school students, their writing and speaking ability, listening and reading comprehension, the recall of the students, the use of structures and the application of the rules of grammar by them. The sub objectives also dealt with

computing the proportionate amount of time given to the students of each group at both the given levels and finding the attitude of the students of the experimental group of each level towards the group work activities. The general research hypothesis to be investigated in the study was to find the comparative effectiveness of teaching English grammar with the help of textbook (deductive method) and by using group work activities (inductive teaching model) and to see which of these two methods had a positive effect on the academic achievement of the elementary and secondary school students in Pakistan. In order to investigate the various dimensions of the general research problem, various null hypotheses were tested at both the elementary and secondary stages. The study was delimited to only 6th grade and 9th grade female students of Dera Ismail Khan City.

In this experimental study one school i.e. Government Girls High School No-1 Dera Ismail Khan was randomly selected out of the Six Government Girls High and Higher secondary schools of Dera Ismail Khan City. Of the four 9th grade sections, two sections were randomly selected by the process of simple random sampling using draw method technique. Similar process was adopted in the case of 6th grade students. Then of the two selected groups at each level, one group was randomly assigned as the experimental and the other as the control group. Similarly two teachers almost similar in respect of educational qualifications, age, training, teaching experience at the secondary level, socio-economic status and their reputation at the school were selected at the secondary level. One teacher was randomly assigned to the experimental and the other to the control group. Similar procedure was adopted at the elementary level. The sample size was eighty (80) at the secondary and one hundred and twelve (112) at the elementary

stage. The relevant pre-tests were administered to the students of both groups at each stage i.e. elementary and secondary to make sure that both the groups at each stage were equivalent at the time of starting the experiment. The Pre-test, Post-test Equivalent Group Design was used. The instrument at each stage consisted of two achievement tests (pre-test and post-test) in the subject of English, different aspects of grammar, five lessons for 9th class and six lessons for 6th class, different group work activities, observation schedule for determining the proportionate amount of time taken by the teachers and students and the attitude scale. Duration of teaching was about one month with daily period of thirty-five minutes at each stage. Both the groups at each stage were exposed to essentially the same experience, except for the method of instruction. The experimental group at each stage was taught English grammar through group work activities by using the inductive teaching model whereas the control group was taught English grammar through textbook using deductive method (traditional method). At the end of the treatment period, relevant post-tests were administered to the students of both the groups at each stage and were scored. The data thus obtained were tabulated and analyzed. Data were analyzed on computer using computer program "Statgraphics". In case of achievement tests, mean, standard deviation and variance of the pre-test and post-test scores of the elementary and secondary stage students were obtained to analyze the data. The test of the significance of the difference between the means of the two independent groups (z-test) was applied to measure the significance of the difference between the means of the two groups of interest at each stage. Significance was seen at .05 level as the criterion for the rejection of null hypotheses. The first eight hypotheses were tested through z-test. In the case of attitude scale, the data were analyzed by calculating the

percentage of the frequency counts in respect of each category of the response i.e. "Yes" "No" and "Undecided". The proportionate amount of time in respect of the elementary as well as secondary stage was calculated by finding the percentage of the time taken by the "teacher" "teacher + students" and students in each' group and at each stage.

The main findings of the study were; The experimental and control groups at both the elementary and secondary stage were equivalent at the time of starting the experiment and the teaching of English grammar through group work activities (inductive approach) played a positive role in improving the academic achievement of the students studying English at the elementary as well as the secondary stage. The group work activities could also be used for improving the writing and speaking ability, reading and listening comprehension, recall, the use of structures and the application of the rules of grammar by the students studying English at both the elementary and secondary stages. Moreover the students of the experimental groups at both the given stages had positive attitude towards the group work activities. It was also found that the time given to the students was directly proportional to their academic achievement and that the development of different language skills and different aspects of grammar were also directly proportional to the time consumed by the students.

ACKNOWLEDGEMENT

All Glory and praise to Almighty Allah Who bestowed his blessing upon the researcher in her life and now enabled her to accomplish this thesis.

The researcher is greatly indebted to her kind and honorable advisor Professor Dr. Maqsood Alam Bukhari, Dean, Faculty of Education, Allama Iqbal Open University Islamabad, whose encouraging, kind, valuable and timely assistance enabled her to complete this study. She can never forget his politeness, because his precious suggestions and valuable advice, removed all her hurdles.

The researcher is especially thankful to Miss Sadia Ainul Badar, M.Ed. student who assisted the researcher in conducting the experiment and collecting data at the elementary stage.

She is especially thankful to Mr. Fazal Masood, Assistant Professor, Computer Centre, Gomal University, Dera Ismail Khan for providing guidance and practical assistance in the analysis of data. It would have been very difficult for her to analyze the data without his assistance.

The researcher is also grateful to Prof. Dr. M. Zafar Iqbal Chairman Department of Teacher Education, Faculty of Education Allama Iqbal Open University Islamabad for providing valuable and precious suggestion for the completion of the thesis.

She extends her deep gratitude to Dr. Nasir-ud-Din, Associate Professor, I.E.R, Gomal University, Dera Ismail Khan for providing valuable guidance in the selection of the topic and planning the thesis and conducting the experiment.

She wishes to express her gratitude to the Headmistress, Government Girls High School No-1, Dera Ismail Khan, teachers teaching English to 6th and 9th grade students and 6th and 9th grade students of the selected school whose cooperation enabled her to conduct experiment and collect data.

She also offers her regards and best wishes to Director I.E.R, and her colleagues, Mr. Muhammad Shah and Mr. Abdur Rehman for providing constant motivation for the completion of this thesis.

She may be failing in her duties, if she does not acknowledge the efforts of Mr. Ghulam Jan Senior Clerk, Institute of Education and Research, Gomal University, Dera Ismail Khan, who enabled her to present the thesis in the present form.

She extends her deep gratitude to all the members of library staff of I.E.R, Gomal University, Dera Ismail Khan for their valuable help.

In the end, she thanks all those who were directly or indirectly involved in the completion of this thesis.

Aisha Bibi
