Abstract v
Introduction 1

Breast morphology and cancer 1
Possible causes of breast cancer 4
Tumor suppressor gene, TP53 gene 6
TP53 protein 8
TP53 pathway in normal cell 11
TP53 pathway in breast cancer 18
  The TP53 pathway in breast cancer lacking TP53 mutations 18
  The TP53 pathway in breast cancer by TP53 mutations 22
Sporadic mutations by TP53 gene 23
TP53 and hereditary breast cancer 23
TP53 gene polymorphisms 24
Progression in research on TP53 26
Status of breast cancer research in Pakistan 28
TP53 gene studies in Pakistan 32
Present study 35

Materials and Methods 36

Questionnaire preparation for patients and determining the status of
Molecular epidemiology 36
Subjects 36
Sample preservation and transport 36
Pedigrees of families included in the present study 37
  Family no. 1 37
  Family no. 2 37
  Family no. 3 38
DNA isolation 39
  From blood samples 39
  From frozen tissue 39
PCR amplification of specific region of Tp53 gene 40
Mutation detection 41
Heteroduplex formation 41
Mutation detection by temporal gradient gel electrophoresis (TTGE) 41
Sequencing of PCR amplified product 42
Analysis of TP53 mutations by IARC bioinformatics tools 42
Detection and restriction analysis of codon 72 polymorphisms 42
Analysis of questionnaires for determining epidemiology of breast cancer
and the status of TP53 gene mutations in Pakistani population 43

Results 44

Mutations in exon 5-8 of TP53 gene. 44
Normal population
Sporadic breast cancer patients
TP53 gene mutation detection in familial breast cancer
Codon 72 polymorphism of TP53 gene.
Normal subjects
Sporadic breast cancer patients
Breast cancer families
   Family 1 and family 2.
   Family 3 (Li.Fraumeni Syndrome family (LFS)
Epidemiological considerations based upon the samples included in this study
TP53 non- mutated patients
   Provincial representation
   Education status
   Income level and feeding habit
   Smoking status
   Exposure to X-rays and type of food used for cooking food
   Age of visitation
   Menarche
   Marital status
   Number of children
   Size of tumor
   Hormonal level and nature of carcinoma
   Familial breast cancer
   Breast cancer patients with TP53 mutated genes

Conclusion.

Discussion.

TP53 gene mutations and polymorphisms in normal population of Pakistan
TP53 mutations
   TP53 gene mutations in sporadic breast cancer patients of Pakistan
   TP53 gene mutations in familial breast cancer patients
      TP53 gene mutations in Li. Fraumeni Syndrome
TP53 polymorphism
Molecular significance of TP53 gene mutations detected in the present research
Significance of TP53 gene mutations and breast cancer in Pakistan
   An early event in breast tumorigenesis
   Frequency of mutations and its clinical value
   Relation of BRCA1 to TP53 gene mutations
   Relation of codon 72 polymorphism to TP53 gene mutations
   Hotspots mutations of TP53 gene
   Importance of the CpG site in TP53 mutations
   TP53 as an epidemiological tool to test mutations in breast cancer
   Prognostic significance
   Predictor of the response
Relationship of TP53 gene mutations to classical and molecular epidemiology of breast cancer in Pakistan
   Geographic variations
Urban, rural population and religion.  
Socio-economic and education status  
Cooking, eating habits and radiation exposure  
Addiction and use of contraceptives  
Early age breast cancer  
Menstruation status  
Marital status, parity and breast feeding  
Family history  
Clinical value of \textit{TP53} gene mutations  
  Tumor size  
  Tumor grade  
  Node involvement.  
  Laterality  
  Estrogen/ Progesterone (ER/PR) status  
  Type of Carcinoma
