1	Introduction	16
1.1	Literature survey	16
1.2	Radial basis functions	17
1.3	RBF interpolation	23
1.4	RBF approximation for PDEs	25
1.5	RBF approximation for time-dependent PDEs	27
2	RBF approximation method for evolutionary PDEs	31
2.1	Evolutionary PDEs	31
2.2	RBF method for evolutionary PDEs	31
2.3	Stability and convergence of the scheme	34
2.4	Algorithm for selecting good value of c	35
2.5	Numerical experiments	37
3	RBF approximation method for higher order time-dependent nonlinear PDEs	40
3.1	RBF method for the KdVB equation	42
3.1.1	Numerical examples	42
3.2	RBF approximation method for the KS equation	47
3.2.1	Numerical examples	49
3.3	RBF method for the Kawahara equation	54
3.3.1	Numerical examples	56
4	RBF approximation method for time-dependent coupled nonlinear PDEs	62
4.1	RBF method for the CMdV equation	65
4.1.1	Numerical experiments	66
4.2	RBF method for NS equation	72
4.2.1	Numerical experiments	73
4.3	RBF method for GNS equation	75
4.3.1	Numerical experiments	76
4.4	RBF method for CKdV equations	79
4.4.1	Numerical experiments	80
4.5	RBF approximation method for GB equation	84

4.5.1	Numerical examples	85
5	RBF approximation method for multi-dimensional time-dependent non-linear PDEs	92
5.1	RBF approximation method for Burgers equation	93
5.1.1	Numerical examples	93
5.2	RBF approximation method for ZK equation	96
5.2.1	Numerical examples	97
5.3	RBF approximation method for Fishers equation	98
5.3.1	Numerical examples	99
6	RBF approximation method for time fractional partial differential equations	101
6.1	Numerical scheme	101
6.1.1	Time fractional derivative approximation	102
6.1.2	RBF approximation scheme	102
6.1.3	Numerical examples	104
6.2	Conclusion	108
