

Table of Contents

1: Introduction	1
2: Review of Literature	6
2.1: Background	6
2.2: Sources of Lipases	6
2.3: Production of Microbial Lipases	8
2.3.1: Fermentation Techniques	8
2.3.1.1: Submerged fermentation	8
2.3.1.2: Solid state fermentation	9
2.3.1.3: Immobilized Cell Culture	10
2.3.2: Media Development and Optimization of Fermentation Media for Lipase Production	11
2.3.2.1: Optimization of Synthetic Media	15
2.3.2.1.1: Optimization of Synthetic Media for bacterial strains	15
2.3.2.1.2: Optimization of Synthetic Media for yeast strains	15
2.3.2.1.3: Optimization of Synthetic Media for fungal strains	16
2.3.2.2: Optimization of Media based on Agro-industrial residues	17
2.4: Purification of Microbial Lipases	19
2.4.1: Purification Techniques	19
2.4.1.1: Concentration of Enzyme Extract	20
2.4.1.2: Chromatographic steps	20
2.4.1.3: Membrane Processes	21
2.4.1.4: Two Phase Aqueous Systems	21
2.4.1.5: Hydrophobic Interaction Chromatography with Modified columns	21
2.4.1.6: Immunopurification	21
2.4.2: Microbial Lipases Purification	22
2.4.2.1: Purification of bacterial lipases	22
2.4.2.2: Purification of yeast lipases	24

2.4.2.3: Purification of fungal lipases	24
2.5: Characterization of Microbial Lipases	25
2.5.1: pH and Temperature Optima	26
2.5.2: pH and Thermal stability	27
2.5.3: Effect of Substrate Concentration (Kinetic studies)	29
2.5.4: Effect of metal ions on lipase activity	30
2.6: Immobilization of Lipase	31
2.6.1: Binding to a carrier	32
2.6.2: Entrapment	33
2.6.3: Crosslinking	34
2.6.3.1: Cross linked Enzyme Crystals (CLECs)	35
2.6.3.2: Cross linked Enzyme Aggregates (CLEAs)	36
3: Material and Methods	
3.1: Reagents	39
3.2: Preparation of substrates	39
3.3: Collection of the fungal strains	39
3.4: Slant preparation	39
3.5: Inoculum preparation	40
3.6: Lipase production by solid state fermentation	40
3.7: Optimization studies	40
3.8: Harvesting of the growth media	40
3.9: Enzyme assay	41
3.10: Protein estimation	41
3.10.1: Standard curve for protein estimation	41
3.11: Purification of lipases	42
3.11.1: Ammonium sulphate precipitation	42
3.11.2: Three step purification using fast protein liquid chromatography	43
3.12: Determination of molar mass	43
3.13: Characterization of lipase	43
3.13.1: Effect of pH on lipase activity	44
3.13.2: Effect of temperature on lipase activity	44

3.13.3: Kinetic Study of Substrate Hydrolysis	44
3.13.4: Effect of pH on Lipase Stability	44
3.13.5: Thermal stability	44
3.13.6: Effect of different Metal ions on Lipase activity	45
3.13.7: Effect of different enzyme inhibitors	45
3.13.8: Effect of organic solvents on lipase activity	45
3.14: Esterification Activity Assay	45
3.15: Immobilization of lipase	46
3.15.1: Entrapment of <i>Penicillium notatum</i> lipase	46
3.15.2: Cross-linked Enzyme Aggregates	47
3.15.2.1: Cross-linking of enzymes using EG-NHS ester	47
3.15.2.2: Cross-linking of enzymes using glutardialdehyde	48
3.15.3: Immobilization efficiency	49
3.15.4: Characterization of immobilized enzyme	49
3.15.5: Reusability of immobilized lipase preparations	49
3.15.6: Morphological analysis of immobilisates	49
3.16: Statistical analysis	50
4: Result and Discussion	
4.1: Screening of fungi for lipase production	51
4.2: Selection of substrate	52
4.3: Optimization of lipase production by <i>Penicillium notatum</i> and <i>Pleurotus ostreatus</i> in SSF	54
4.3.1: Effect of incubation period	54
4.3.2: Effect of moisture content	55
4.3.3: Effect of pH	56
4.3.4: Effect of incubation temperature on the lipase production	58
4.3.5: Effect of additional carbon sources on lipase production	59
4.3.6: Effect of olive oil concentration on lipase production	60
4.3.7: Effect of additional nitrogen source	61
4.4: Purification of <i>Penicillium notatum</i> lipase	63
4.4.1 Precipitation of lipase	64

4.4.2 Ion-Exchange chromatography	64
4.4.3 Hydrophobic interaction chromatography	65
4.4.4: Ion-Exchange chromatography	66
4.4.5: Molecular weight of lipase	68
4.5: Characterization of lipase	69
4.5.1 Optimum pH	69
4.5.2: Effect of temperature and activation energy	70
4.5.3: Determination of kinetics for substrate (PNPP) hydrolysis (V_{\max} , k_m)	72
4.5.4: pH stability	73
4.5.5: Thermal stability and thermodynamics of irreversible thermal denaturation	74
4.5.6: Effect of metals	77
4.5.7: Effect of Inhibitors	78
4.5.7.1: Effect of Protease	78
4.5.7.2: Effect of Urea	78
4.5.8: Effect of organic solvents on lipase activity	80
4.6: Immobilization of <i>Penicillium notatum</i> lipase	82
4.6.1: Lipase Immobilization by entrapment in silicon polymers	82
4.6.1.1: Effect of different enzyme loading	84
4.6.1.2: Effect of temperature on immobilized enzyme	85
4.6.1.3: Thermal stability of immobilized enzyme	86
4.6.1.4: Reusability of immobilized enzyme	90
4.6.1.5: Scanning electron microscopy for morphological analysis	91
4.6.2: Enzyme immobilization via cross-linking to form cross linked enzyme aggregates	93
4.6.2.1: Optimization of cross-linker concentration for preparation of CLEAs	94
4.6.2.2: Immobilization efficiency and comparison of activities of CLEAs	96
4.6.2.3: Fluorescence and scanning electron microscopy	97
4.6.2.4: Effect of temperature on the activity of aggregates	97
4.6.2.5: Thermo stability of CLEAs	101
4.6.2.6: Reusability of CLEAs	103
5: Summary	106
