# Table of Contents

Statement of Originality v
Abstract vi
Acknowledgement viii
Table of Contents x
List of Figures xiii
List of Tables xviii

**Chapter 1** 1
**Introduction** 1
  1.1 Importance Of Technology 2
  1.2 Background 3
  1.3 Objectives 3
  1.4 Problem Statement 3
    1.4.1 Need Of An Efficient Early Warning System 4
    1.4.2 Integrated Interoperable Wireless Communication Network for Disaster Responders (IIWCNDR) 4
  1.5 Research Questions 5
    1.5.1 Survey 5
    1.5.2 Analysis 6
    1.5.3 Synthesis 6
  1.6 Definitions 6
    1.6.1 Information and Communication Technology (ICT) 6
  1.7 Thesis Organization 7

**Chapter 2** 9
**Literature Review** 9
  2.1 Disaster Management Problem- How To Get Success? 9
  2.2 Disaster Resilience- Planning And Preparedness 10
    2.2.1 Early Warning Systems – The International Focus 10
    2.2.2 Early Warning Systems- The International Scenario 12
    2.2.3 World Early Warning Systems 14
  2.3 Disaster Response and Role of ICT 17
2.4 The Issue Of Interoperability
   2.4.1 Challenges to Interoperability
   2.4.2 Interagency Communication Problems
2.5 Disaster Management Organizations in Pakistan
   2.5.1 Pakistan’s Demography
2.6 Limitations of Work

Chapter 3
Designing Early Warning System
  3.1 Introduction
  3.2 CIVIONICS Early Warning Methodology
     3.2.1 The Multi-Hazard Approach
  3.3 Proposed CIVIONICS Earthquake Early Warning System
     3.3.1 Concept of Seismic Waves
  3.4 CIVEEWS Data Collection and Identification of Seismic Hazard Zones
  3.5 CIVEEWS Network Architecture
  3.6 Selection of Data Logger
  3.7 Analysis and Simulation Phase
  3.8 Telecommunication Infrastructure
  3.9 Dissemination of Warning Messages
  3.10 Modeling and Simulation of CIVIONICS MH Early Warning System
     3.10.1 Simulation Graphs
  3.11 Designing CIVIONICS Earthquake Early Warning System- Zigbee Model
     3.11.1 Simulation Graphs
     3.11.2 Discussion Of Results

Chapter 4
Technology and Disaster Engineering During Response Phase
  4.1 First Responders’ Requirements
  4.2 Need of 4G Access Techniques
  4.3 Communication Needs For Law Enforcement Agencies
     4.3.1 Fire
     4.3.2 Blast
     4.3.3 Earthquake
4.4 Recommendations

4.5 Requirements For An Interoperable Communication Network

4.5.1 Availability $A_v$ 

4.6 Proposed Pakistan’s Disaster Communications Interoperability Plan

4.6.1 Scenario 1: Fixed Network Interconnected With MANET

4.6.2 Scenario II: Interoperable Networks

4.6.2.1 Results of Interoperability Scenario

4.6.3 Scenario III: Interoperability Scenario Linked With EWS

4.7 Disaster Engineering Computer Tools

4.7.1 Salient Features Of HAZUS-MH Loss Estimation Tool

4.7.2 Implementing SAHANA DISASTER MANAGEMENT Tool

Chapter 5

Conclusion, Discussion and Future Directions
