# TABLE OF CONTENTS

Preliminaries of Terms related to Study  ix  
Abbreviations  xvi  
Abstract  xiii  

1  Introduction  1  
1.1  Problem of Rapid Population Growth  1  
1.2  Definition of Fertility  3  
1.3  Measurement of Fertility  3  
  1.3.1 Aggregate Measurement of Fertility  4  
  1.3.2 Measurement of Individual Fertility  6  
1.4  Fertility Control  6  
  1.4.1 Natural Fertility Restraints  6  
  1.4.2 Behavioral Restraints of Fertility  7  
1.5  Types of Fertility Limiting Behaviors  7  
1.6  Factors and Covariates Affecting Fertility of Individual (Stopping Behaviour)  8  
1.7  Birth Interval Analysis (Spacing Behaviour)  22  
1.8  An Economic Theory of Fertility  28  
1.9  Effects of Child Bearing on Parents Life Style  30  
1.10 Effect of Interpersonal Interaction and Communication on the Fertility Norms  31  
1.11 Problem of Over Population  32  
1.12 Demographic Profiles of Region (Pakistan)  34  
1.13 Drafts for Execution of Study  36  
  1.13.1 Objectives  36  
  1.13.2 Study Plan  37  
1.14 Utilization of Research  38  

2  Literature Review  40  
2.1 Factors Affecting Children Ever Born [Stopping Behavior of Fertility]  40  
2.2 Birth Interval Analysis [Spacing Behavior of Fertility]  57  
2.3 Main Findings of Literature Review keeping in view the Methodology  65  
2.4 Main Findings of Literature Review keeping in view the Factors  68  
2.5 Regression Analysis with Missing Values  70  

3  Research Methodology  71  
3.1 Sample Design  71  
3.2 Questionnaire  73  
3.3 Response Rate  73  
3.4 Missing Data  73  
  3.4.1 Analysis with Missing Observations  74  
3.5 Description of Covariates and Factors  75  
  3.5.1 Limitations of Data  81
### 3.6 Bivariate Analysis
- 3.6.1 Test for Independence of Attributes
- 3.6.2 The Likelihood Ratio Test
- 3.6.3 Odds Ratios (OR)
### 3.7 Conditional Independence
- 3.7.1 Cochrane-Mantel-Henszel Tests
- 3.7.2 Testing Homogeneity of Odd Ratios
### 3.8 Binary Regression Model
- 3.8.1 Complementary Log-log Regression (cloglog)
- 3.8.2 Estimation of Parameters for Binary Regression Model
- 3.8.3 Wald Test
- 3.8.4 Model Diagnostics
- 3.8.5 Choice of Link Function
- 3.8.6 Assessing Strength of Association of Model
- 3.8.7 Quality of Prediction
### 3.9 Regression Modeling for Count Data
- 3.9.1 Poisson Regression Model
- 3.9.2 Poisson PMLE
- 3.9.3 OverDispersion Tests
- 3.9.4 The Hurdle Model
### 3.10 Survival Analysis (For Birth Interval Analysis)
- 3.10.1 Survival Function
- 3.10.2 Hazard Function
- 3.10.3 Product Limit Survivorship Function
- 3.10.4 Long Rank Test
- 3.10.5 Cox Proportional Regression Model

### 4 Statistical Analyses of Factors Affecting Children Ever Born
- 4.1 Descriptive Analysis
- 4.2 Bivariate Analysis
- 4.2.1 Testing Conditional Independence after Confounding Region
- 4.3 Binary Models for Factors affecting Children Ever Born
- 4.3.1 Model Diagnostics
- 4.3.2 Decision of Link Function
- 4.3.3 Computations of Complementary loglog Regression Model for Factor Affecting Children ever Born
- 4.3.4 Interpretation of Coefficients of Cloglog Model
- 4.3.5 Assessing Strength of Association
- 4.3.6 Assessing Quality of Predictions
- 4.4 Poisson Logit Hurdle Model for Children Ever Born (For Incomplete Fertility Data)
- 4.4.1 Over Dispersion Test
4.5 Poisson Regression Model for Children Ever Born (with Completed Fertility Data)
  4.5.1 Ovedispersion Test
  4.5.2 Interpretation of Factors Contribution
4.6 Analysis of Factors affecting CEB using the Multiple Imputations
  4.6.1 Testing Randomness of Missing Observations
  4.6.2 Testing Pattern of Missing Observations
4.7 Comparisons of Models

5 Statistical Analyses of Birth Intervals
  5.1 Marriage to First Birth Interval
    5.1.1 Descriptive Analysis for Marriage to First Birth Interval
    5.1.2 Non Parametric Analysis (Kaplan Meier Product Limit Estimate of Survival Time) for Marriage to First Birth Interval
    5.1.3 Comparison of Survival Distribution for Marriage to First Birth Interval
    5.1.4 Univariate Analysis (Marriage to First Birth Interval)
    5.1.5 Multivariate Analysis: Cox Regression Model for Marriage to First Birth Interval
    5.1.6 Prediction Model for Marriage to First Birth Interval
    5.1.7 Interpretation of Relative Risk of Prediction Model (Marriage to First Birth Interval)
    5.1.8 Covariate Survival Curve for Marriage to First Birth Interval
  5.2 Analysis of Higher Order Birth Intervals
    5.2.1 Problem of Censoring and Selectivity
    5.2.2 Descriptive Analysis for Higher Order Birth Intervals
    5.2.3 Non Parametric Analysis (Kaplan Meier Product Limit Estimate of Survival Time) for Higher Birth Intervals
    5.2.4 Univariate Analysis for Higher Order Birth Intervals
    5.2.5 Multivariate Analysis: Cox Regression Model for Higher Order Birth Intervals
    5.2.6 Prediction Model for Higher Order Birth Intervals
    5.2.7 Interpretation of Relative Risk
    5.2.8 Covariate Survival Curve for Higher Order Birth Intervals
  5.3 Study of Change in Socio-economic Variables after Inclusion of Biological Factors for Higher Order Birth Intervals
    5.3.1 Change in the Effect of covariates of Socio-economic Model after inclusion of Biological Factors
  5.4 Comparison between the Two Models (Marriage to First Birth Interval and Model of Higher Order Birth Intervals)

6 Conclusions
  6.1 Limitations of Study
  6.2 Recommendations for Future Research
6.3 Policy Implication of Study 249

A Appendix 251
