

Contents

1	Introduction	6
1.1	Solitary waves and solitons	6
1.1.1	Ion acoustic solitary waves in plasma	7
1.2	Electron-positron plasma	8
1.2.1	Unique features of electron-positron plasma	10
1.3	Pair-ion plasmas	12
1.4	Degenerate plasmas	14
1.4.1	Characteristics of degenerate Fermi plasmas	14
2	Motivations	19
2.1	Thesis outline	21
3	Nonlinear screening effect in ultra-relativistic degenerate electron-positron gas	22
3.1	Introduction	22
3.2	Mathematical preliminaries	24
3.3	Nonlinear static screening	27
3.3.1	Solution when potential is small	27
3.3.2	Nonlinear one dimensional case	28
3.3.3	Strongly correlated plasma	29
3.3.4	Formation of bound state	33
3.4	Random phase electrostatic field fluctuations	34

3.5	Conclusion	37
4	Nonlinear structure of ion-acoustic waves in a degenerate electron-positron-ion plasma	39
4.1	Introduction	39
4.2	Ion acoustic solitary waves in nonrelativistic Thomas Fermi plasma	40
4.2.1	Ion acoustic waves	41
4.2.2	Degenerate electron and positron density at absolute zero	42
4.2.3	Ion density in co-moving frame	44
4.2.4	Sagdeev potential	45
4.2.5	Conditions for the existence of solitary waves	45
4.2.6	Range of Mach number	46
4.2.7	Graphs and discussion	48
4.2.8	Approximate amplitude IASWs	49
4.3	Ion acoustic solitary waves in ultrarelativistic Thomas Fermi plasma	50
4.3.1	Linear dispersion relation	50
4.3.2	Electron and positron density	51
4.3.3	Sagdeev potential	51
4.3.4	Numerical analysis	52
4.3.5	IASWs with weak nonlinearity	53
4.4	Summary	54
5	Nonlinear structure of ion-acoustic waves in completely degenerate relativistic electron-positron and ion plasma	56
5.1	Introduction	56
5.2	Basic hydrodynamic equations and derivation of ion-acoustic waves	57
5.2.1	Relativistic degenerate electron and positron density	60
5.3	Derivation of the Sagdeev potential	61
5.3.1	Relativistic effects on the range of Mach number	62
5.3.2	Numerical analysis	66
5.4	Small-but finite amplitude IASWs	68

5.5	Summary	69
6	Ion-acoustic solitary waves in ultra-relativistic degenerate pair-ion plasmas	71
6.1	Theory	72
6.1.1	Linear dispersion relation	74
6.1.2	Sagdeev potential	74
6.1.3	Nature of solitons	76
6.2	Numerical analysis and discussion	77
6.3	Small amplitude ion-acoustic solitary waves	85
6.4	Summary	86
7	Summary and Conclusion	88
