	Abstract	
	CHAPTER – 1	
	Introduction	1
1.1	Water pollution by industrial wastes	1
1.2	Multivariate statistical techniques for the assessment of environmental pollution	2
1.3	Effect of irrigation with wastewater on soil quality	3
1.4	Effect of waste water irrigation on food crops	4
1.5	Speciation of bioavailable metals in the soil	5
1.6	Transfer of metals from soil to plants	6
1.6.1	Classification of plants based on their metals accumulation	7
1.6.2	Distribution and assimilation of metals by the plants	8
1.7	Risk assessment due to the consumption of contaminated food crops by human	8
1.7.1	Daily Intake of Metals (DIM)	9
1.7.2	Risk assessment	9
1.8	Effect of contaminated fodder crops on the quality of meat, milk and milk products	10
1.9	Bioaccumulation of heavy metals in human's blood through different food chains and their health effects	10
1.9.1	Anthrophometry	11
	Literature Review	16
	CHAPTER -2	
	Experimental	
2.1	Description of the study areas	29
2.1.1	Peshawar	29
2.1.2	Dir	29
2.2	Sampling Plan	32
2.2.1	Collection and pretreatment of effluents, soil and ground water sample	32
2.2.2	Collection and pretreatment of agricultural soil and food crops samples	33
2.2.3	Collection and pretreatment of blood Samples	33
2.2.4	Collection and pretreatment of forage grass, milk and meat samplings	34
2.2.5	Anthropometry	34
2.2.5.1	Collection of data	34
2.2.5.2	Determination of height	34
2.2.5.3	Determination of weight	34
2.2.5.4	Determination of the Mid Upper Arm Circumference (MUAC) and Triceps Skin Fold (TSF)	34
2.2.5.5	Determination of the Body Mass Index (BMI)	35
2.2.5.6	Determination of frame size	35
2.2.5.7	Energy Requirement for the Individual	36
2.3	Fractionation of soil	38
2.3.1	Acid digestion of the soil sample	39

S. No.	Topic	Page No.
2.3.2	Acid digestion of food crops samples	39
2.3.3	Acid digestion of meat and milk samples	40
2.3.4	Analytical method for acid digestion of blood samples	40
2.4	Analytical procedures	41
2.4.1	Determination of physicochemical parameters of effluents and ground water samples	41
2.4.2	Determination of Pb, Ni, Cr, Cu, Co, Mn, Cd and Zn by Atomic absorption spectrophotometer	41
2.4.3	Determination of Hg	42
2.4.4	Determination of Arsenic	42
2.5	Data Analysis	43
2.5.1	Metal transfer factor	43
2.5.2	Daily intake of metals by human body	43
2.5.3	Risk assessment	44
2.5.4	Statistical analysis of the data	44
CHAPTER – 3		
Results and Discussion		
3.1	Physicochemical and toxic trace metals (Hg and As) characterization of industrial effluents and its effect on the surrounding soil and ground water quality	45
3.1.1	pH	45
3.1.2	Total dissolved solids	46
3.1.3	Hardness	47
3.1.4	Dissolved oxygen	47
3.1.5	Electrical Conductance (EC)	47
3.1.6	Mercury and Arsenic	54
3.2	Use of multivariate statistical techniques for the source identification, distribution pattern, classification of point sources and effects of pollutants	69
3.3	Evaluation of the effects of wastewater irrigation on the phytoavailability of metals in the agricultural soil and their uptake by the food crops and human health risk due to the consumption of the food crops	86
3.3.1	Soil fractionation	86
3.3.2	Heavy metals in food crops	89
3.3.3	Heavy metals transfer from soil to plants	93
3.3.4	Cluster analysis	94
3.3.5	Daily Intake of Metals (DIM) through food and human health risk	96
3.4	Effect of consumption of food crops, meat and milk on the blood metal composition of humans in polluted and less polluted areas	105
3.4.1	Distribution of heavy metals in forage grass	105
3.4.2	Distribution of heavy metals in blood samples of males and females of different age groups	105
3.4.3	Distribution of heavy metals in meat and milk samples	120
3.4.4	Statistical Analysis	122
3.4.5	Cluster Analysis	123

S. No.	Topic	Page No.
3.5	Anthropometric measurements for the nutritional status of the individuals from the study areas	127
	Conclusions	153
	References	157
