Chapter 1 LITERATURE REVIEW

1.1 Polyorganosiloxane

1.1.1 Characteristics of Polyorganosiloxanes Structure

1.1.2 Substituents on the Siloxane Backbone

1.1.3 Properties of Polyorganosiloxane Elastomers

1.1.4 Mechanical Properties

1.2 Polyamides

1.2.1 Synthetic Methods for Polyamides

1.2.1.1 Direct Amidation

1.2.1.2 Polyamides by the Reaction of Acid Chlorides

1.2.1.3 Ring Opening Polymerization

1.2.2 Properties of Polyamides

1.2.2.1 Acidolysis and Aminolysis

1.2.2.2 Solubility

1.2.2.3 Grafting with Unsaturated Acids

1.2.2.4 Substitution of the Amide Hydrogen

1.2.2.5 Crystallinity

1.2.3 Thermal Degradation

1.2.4 Metal Containing Polymers and Polyamides

1.3 Organogermanium Compounds

1.3.1 Hydrogermylation Reactions

1.3.1.1 Polarity of Ge-H Bond

1.3.1.2 Catalyst

1.3.1.3 Role of Solvent

1.3.1.4 Effect of Reagent Structures
Chapter 2  EXPERIMENTAL

2.1  Experimental  39
2.1.1 Material and Methods  39
2.2 General Procedure for the Synthesis Of Organogermanium Compounds Derived From Unsaturated Dicarboxylic Acids  40
2.2.1 2-(Trichlorogermylmethyl)butanedioic Acid (1)  41
2.2.2 3-(Trichlorogermyl)pentanediioic Acid (2)  41
2.2.3 2-(Trichlorogermyl)butanediioic Acid (3)  42
2.2.4 2-Methyl-3-(Trichlorogermyl)butanediioic Acid (4)  42
2.2.5 (2S,3S)-2-Methyl-3-(Trichlorogermyl)butanediioic Acid (5)  43
2.3 Preparation of Trichlorogermyl Substituted Diacid Chlorides  43
2.4 General Procedure of Synthesis of Block Copolymers PA 1 - PA 17  43
2.4.1 Block Copolymer PA 1  44
2.4.2 Block Copolymer PA 2  44
2.4.3 Block Copolymer PA 3  45
### Chapter 3 RESULTS AND DISCUSSION

3.1 Block Copolymers of Aminopropyl-Terminated Polydimethylsiloxane and Polyamide having Trichlorogermyl Pendant Group

3.1.1 Synthesis and Characterization of Organogermanium Compounds Derived from Unsaturated Dicarboxylic Acids (1-5)

3.1.2 Preparation of (Trichlorogermyl)Dioyl Chlorides 1a-5a

3.1.3 Synthesis and Characterization of Block Copolymers PA 1-PA 17

3.1.3.1 FT-IR Studies

3.1.3.2 NMR Studies

3.2 Thermal Studies

3.2.1 Thermal Analysis

3.2.2 Thermal Stability

3.2.3 Kinetic Parameters

3.2.4 Evolved Gas Detection via TGA/FTIR

3.3 Scanning Electron Microscopy

3.4 References

### Chapter 4 LAYER BY LAYER NANOFABRICATION
