

Contents

1	Introduction	1
1.1	How the vector borne disease spread	6
1.2	Historical perspective of vector borne disease	7
1.3	Impact of vector borne disease on public health and economic	8
1.3.1	Signs and symptoms	9
1.3.2	How soon after bite do symptoms appear	10
1.4	Basic epidemiology of vector borne disease	10
1.4.1	Malaria	10
1.4.2	Dengue	11
1.4.3	West Nile virus	11
1.4.4	Chikungunya	11
1.5	How can vector borne disease be prevented	12
1.5.1	Avoid mosquito bites when traveling in tropical areas	12
1.5.2	Eliminate mosquito breeding sites near your dwelling	12
2	Basic Epidemiology and Preliminaries	13
2.1	Introduction	13
2.2	Compartmental modeling	14
2.3	The incidence function	15
2.3.1	The epidemic SIR model	17
2.3.2	The endemic SIR model	17
2.4	Brief literature survey on modeling of infectious diseases	18
2.5	Stability theory	21

2.5.1	Nonlinear dynamical systems and equilibrium points	21
2.5.2	Local stability in first order systems	22
2.5.3	Routh-Hurwitz criterion	23
2.6	Method for local stability of equilibria	24
2.6.1	Lyapunov functions and LaSalle's invariance principle	25
2.7	Basic reproduction number	27
2.8	Bifurcation theory	29
2.9	Optimal control technique	30
2.9.1	The general optimal control problem	30
2.9.2	Pontryagin's Maximum Principle	30
3	Biological Control of Malaria: A Mathematical Model	32
3.1	Overview	32
3.2	Introduction	32
3.3	The model	34
3.4	Existence of equilibria	36
3.5	The basic reproduction number \mathcal{R}_0	43
3.6	Stability analysis	43
3.7	Backward bifurcation analysis	48
3.8	Numerical simulation and discussion	53
3.9	Conclusions	60
4	Formulation of a Vector Borne Disease Model with Direct Trans-	
	mission	62
4.1	Overview	62
4.2	Introduction	63
4.3	Model frame work	64
4.4	Mathematical analysis of the model	68
4.4.1	Positivity of solutions	68
4.4.2	Invariant region	69
4.5	Disease free equilibrium and its stability	70

4.6	Existence of the endemic equilibria	74
4.7	Global stability analysis	76
4.8	Numerical results and discussion	79
4.9	Conclusions	94
5	Optimal Control of a Vector Borne Disease	95
5.1	Overview	95
5.2	Introduction	96
5.3	Application of optimal control to a vector borne disease	97
5.4	Existence of control problem	101
5.5	Numerical results and discussion	106
5.6	Conclusions	110
5.7	Areas of possible improvement to our model	111
	Bibliography	112
