Summary

## Part 1 Primary microcephaly

### 1 INTRODUCTION

1.1 Primary microcephaly (MCPH)

1.2 Structure of cerebral cortex

1.3 Development of cerebral cortex

1.4 Clinical features of primary microcephaly

1.5 MCPH genes and their function

1.5.1 Microcephalin (*MCPH1*)

1.5.2 Abnormal spindle like microcephaly associated (*ASPM*)

1.5.3 Cyclin dependent kinase5 regulatory associated protein (*CDK5RAP2*)

1.5.4 Centrosomal protein J (*CENPJ*)

1.5.5 *STIL* (SCL/TAL1 interrupting locus)

1.6 Objectives of study

### 2 MATERIALS AND METHODS

2.1 Families studied

2.1.1 MCP3

2.1.2 MCP6
2.1.3 MCP7
2.1.4 MCP9
2.1.5 MCP11
2.1.6 MCP15
2.1.7 MCP17
2.1.8 MCP18
2.1.9 MCP21
2.1.10 MCP22
2.1.11 MCP35
2.1.12 MCP36
2.2 Clinical data
2.3 Blood sampling
2.4 DNA extraction
2.5 Polymerase chain reaction
2.6 Agarose gel electrophoresis
2.7 Genotyping using fluorescently labeled primers
2.8 Preparation of samples for ABI 3130xl genetic analyzer
2.9 Linkage analysis
2.10 Mutation screening
2.10.1 DNA sequencing
2.10.2 Purification of PCR product from agarose gel
2.10.3 Purification of PCR product
2.10.4 Sequencing PCR reactions

2.10.5 Precipitation of sequencing PCR products

2.10.6 Sequencing data analysis

2.11 Restriction analysis

3 RESULTS

3.1 Linkage studies

3.2 Mutation analysis

3.2.1 Sequencing of \textit{ASPM} in MCPH5 linked families

3.2.2 Compound heterozygous \textit{ASPM} mutations

3.2.2.1 Family MCP18

3.2.2.2 Family MCP35

3.2.3 Sequencing of \textit{CENPJ}

3.2.4 Mutation screening in control population

3.2.5 Family MCP15

3.2.6 Sequencing of candidate genes in MCPH2 region

3.2.7 Sequencing of \textit{MCPH1}

4 DISCUSSION

Part 2 Inherited limb disorders

5 INTRODUCTION

5.1 Polydactyly

5.2 Types of polydactyly

5.4.1.7 Syndactyly Type VII, Cenani-Lenz Syndactyly (MIM 212780)
5.4.1.8 Syndactyly Type VIII
5.4.1.9 Syndactyly Type IX, Malik-Percin type syndactyly
5.5   Syndromic hand anomalies
5.5.1  Greig cephalopolysyndactyly syndrome
5.6   Limb development
6  MATERIALS AND METHODS
6.1   Methods
6.1.1  Nuclear extract preparation
6.1.2  Annealing of probes for EMSA
6.1.3  Radioactive labelling of double stranded EMSA probes
6.1.4 Electrophoretical mobility shift assay (EMSA) procedure

6.1.5 Genome wide linkage analysis

6.1.6 Candidate gene search

6.1.7 Copy number variation detection

6.2 Families studied

6.2.1 Family PD1

6.2.2 Family PD2

6.2.3 Family PD316

6.2.4 Family PD7

6.2.5 Family PD16

6.2.7 Family BD1

6.2.7.1 Clinical description

6.2.8 Syndactyly families

6.2.8.1 Family PD14A

7 RESULTS AND DISCUSSION

7.1 Family PD1

7.1.1 Linkage analysis and Mutation detection

7.1.2 Electrophoretic mobility shift assay

7.1.3 Discussion

7.2 Family PD2

7.2.1 Linkage analysis and Mutation detection
7.3 Family PD316

7.4 Family PD7

7.5 Family PD16

7.6 Discussion

7.3 Family BD1

7.3.1 Exclusion of locus on 2q31 (HOXD13) for brachydactyly type E

7.3.2 Genome-wide search using 10K SNP array and fine mapping

7.3.3 Mutation screening

7.3.4 Genome wide SNP array 6.0 analysis to detect copy number variation

7.3.5 Discussion

7.4 Family PD14A

7.4.1 Novel isolated autosomal recessive 2nd and 3rd digit syndactyly

7.4.2 Exclusion studies and Genome wide linkage analysis

7.4.3 Sequencing of candidate gene

7.4.4 Discussion
