

CONTENTS

Chapter	Title	Page No.
<i>Chapter 1</i>	<i>Introduction</i>	1
<i>Chapter 2</i>	<i>Review of Literature</i>	10
2.1	Harmful effects of azo dye contaminated wastewater to environment and biological life	10
2.2	Strategies to remove color from the azo dye contaminated wastewater	11
2.2.1	Physical	11
2.2.2	Chemical	12
2.2.3	Biological	12
2.3	Isolation and screening of azo dye degrading bacteria	13
2.4	Effect of co-substrate on bacterial degradation of azo dyes	14
2.5	Effect of oxygen on bacterial degradation of azo dyes	15
2.6	Effect of pH and temperature on bacterial degradation of azo dyes	16
2.7	Effect of redox mediators on bacterial degradation of azo dyes	18
2.8	Effect of various salts on bacterial degradation of azo dyes	18
2.8.1	NaCl salinity	18
2.8.2	NaNO ₃ salinity	19
2.8.3	Na ₂ SO ₄ salinity	20
2.9	Effect of various metal ions on decolorization by bacteria	20
2.10	Mechanism of inhibition of biodegradation of azo dyes caused by metal ions	21
2.11	Localization of azoreductase involved in azo dye degradation by bacteria	22
2.12	Characteristics of bacterial azoreductase	22
<i>Chapter 3</i>	<i>Materials and Methods</i>	24
3.1	Materials and chemicals	24
3.2	Recovery of azo dyes from soil by various extracting substances	24

3.3	Stability of various azo dyes in sterilized and non-sterilized soil	25
3.4	Assessment of toxicity of azo dyes	26
3.4.1	Effect of azo dyes on bacterial biomass production in dye-containing liquid medium	26
3.4.2	Effect of azo dyes on soil microbial community structural changes	26
3.5	Isolation and screening of azo dye degrading bacteria	27
3.6	Decolorization of structurally different azo dyes by cells of strain IFN4	28
3.7	Optimization of dye decolorization process by cells of strain IFN4	29
3.8	Comparative effect of different co-substrates on azo dye decolorization by cells of strain IFN4	29
3.9	Localization of azoreductase involved in azo dye decolorization by strain IFN4	30
3.10	Comparative effect of various co-substrates on azoreductase activity of strain IFN4	32
3.11	Flavin reductase activity and correlation between flavin reduction and azo dye reduction	33
3.12	Influence of metal ions on biodecolorization of RB 5 and growth of bacterium	33
3.13	Influence of various salts on biodecolorization of RB 5 and growth of bacterium	34
3.14	Influence of metals ions and salts on azoreductase activity of strain IFN4	34
3.15	Effect of triton X-100 on activity of membrane bound azoreductase of strain IFN4	35
3.16	Characteristics of membrane bound azoreductase of strain IFN4	35
3.17	Purification of azoreductase	36
3.18	Determination of molecular mass and identification of the protein	36
3.19	Bacterial identification	37
3.20	Statistical methods	37

Chapter 4	Results	40
4.1	Recovery of DR 81 azo dye from soil by various extracting substances	40
4.2	Recovery of structurally different azo dyes from soil	40
4.3	Assessment of stability of azo dyes in soil	45
4.4	Effect of azo dyes on biomass production of plant growth promoting rhizobacteria	45
4.5	Effect of azo dyes on soil microbial community structural changes	45
4.6	Isolation and screening of azo dye decolorizing bacteria	51
4.7	Decolorization of structurally different azo dyes by cells of strain IFN4	51
4.8	Effect of operational conditions and inoculum rate on azo dye decolorization by cells of strain IFN4	56
4.9	Comparative effect of different co-substrates on decolorization activity of cells of strain IFN4	62
4.10	Rate of azo dye decolorization at various concentrations of yeast extract by cells of strain IFN4	62
4.11	Effect of different components of yeast extract on azo dye decolorization by cells of strain IFN4	62
4.12	Effect of various concentrations of riboflavin on the decolorization of mixture of azo dyes by cells of strain IFN4	66
4.13	Localization of azoreductase involved in azo dye decolorization	66
4.14	Effect of NADH concentration on azoreductase activity	66
4.15	Effect of various co-substrates on azoreductase activity of strain IFN4	71
4.16	Effect of yeast extract components on azoreductase activity of strain IFN4	71
4.17	Kinetic studies with yeast extract	71
4.18	Effect of different concentrations of riboflavin on azoreductase activity of strain IFN4	75

4.19	Flavin reductase activity and correlation between flavin reduction and azo dye reduction	75
4.20	Influence of various metal ions on the decolorization of RB 5 azo dye by cells of strain IFN4	79
4.21	Influence of mixture of metal ions on decolorization of RB 5 by cells of strain IFN4	79
4.22	Effect of different concentrations of metal ions on growth of bacterial cells	82
4.23	Influence of different concentrations of individual metals ions and their mixture on azoreductase activity of strain IFN4	82
2.24	Effect of NaCl on decolorization of RB 5 by cells of strain IFN4	86
4.25	Effect of Na ₂ SO ₄ on decolorization of RB 5 by cells of strain IFN4	86
4.26	Effect of NaNO ₃ on decolorization of RB 5 by whole cells of strain IFN4	90
4.27	Effect of salts on azoreductase activity and growth of cells of strain IFN4	90
4.28	Effect of Triton-X100 on membrane bound azoreductase of strain IFN4	95
4.29	Substrate specificity of membrane bound azoreductase of strain IFN4	95
4.30	Temperature optima and thermal stability of membrane bound azoreductase of strain IFN4	95
4.31	Effect of pH on azoreductase activity of strain IFN4	99
4.32	Effect of redox mediators on azoreductase activity of strain IFN4	99
4.33	Enzyme purification	99
Chapter 5	Discussion	108
	Summary	118
	Concluding remarks and Future perspectives	121
	Literature Cited	122
