

TABLE OF CONTENTS

1	Fundamentals of Crystallization Process	1
1.1	Crystallization	2
1.2	Types of Crystallization	2
1.2.1	Batch Crystallization	3
1.2.2	Continuous Crystallization	3
1.3	Enantiomers	3
1.4	Preferential Crys	4
1.5	Ternary Phase D	5
1.6	Historical Background and Motivation	6
1.7	New Results	8
1.8	Layout of the Thesis	10
1.9	Publications Related to the Research Work	12
2	Population Balance Models	13
2.1	Population Balance Models	14
2.2	Growth and Nucleation	15
2.3	Dissolution	16
2.4	Aggregation	16
2.5	Breakage	17
2.6	Goal Functions	17

3	Batch Crystallization	19
3.1	Batch Crystallization Model	21
3.2	Numerical Schemes	22
3.2.1	Implementation of Discontinuous Galerkin finite element method	22
3.2.2	Implementation of Finite Volume Scheme	27
3.3	Test Problems	29
4	Batch Preferential Crystallization	45
4.1	Batch Preferential Crystallization Model	46
4.2	Coupled Batch Preferential Crystallization Model	48
4.3	Numerical Approximation of the Models	51
4.4	Test Problems for Single Crystallizer	54
4.5	Test Problems for Coupled Crystallizers	59
5	Continuous Preferential Crystallization	79
5.1	Continuous Preferential Crystallization Model	81
5.2	Numerical Techniques	87
5.2.1	Implementation of HR-FVS	88
5.2.2	Implementation of DG-Scheme	90
5.3	Test Problems	90
6	Coupled Continuous Preferential Crystallization	128
6.1	Coupled Continuous Crystallization Model	131
6.2	Implementation of Finite Volume Scheme	138
6.3	Test Problems	140
6.3.1	Numerical Test Problem	142

7	Conclusion and Future Recommendations	161
7.1	Conclusion	162
7.2	Future Recommendations	164
8	References	168
