

# Table of Contents

<b>CHAPTER</b>		<b>PAGE</b>
<b>Chapter 1</b>		
1.1	General Introduction	1
1.2	Solvent System	1
1.3	Structure of water	2
1.4	Structure of Dimethyl Sulfoxide	3
1.5	Structure of water near an ion	4
1.6	Viscosity	8
1.7	The dynamic viscosity	8
1.8	Kinematic viscosity	9
1.9.	Relative viscosity	9
1.10	Specific viscosity	9
1.11	The state of solutes in electrolyte solutions	9
1.12	Ion solvent interaction	11
1.13	Jonee-Dole expression for viscosities of electrolytic solutions	12
1.14	The viscosity <i>B</i> -coefficients	13
1.15	Activation and Gibbs Free Energy of viscous flow	15
<b>Chapter 2</b>		
2.1	Literature survey	16
2.2	Viscosity <i>B</i> -Coefficients of ions in solutions	18
2.3	Viscosity <i>B</i> -Coefficients in solutions in aqueous solutions.	27

2.4	Viscosity <i>B</i> -Coefficients in solutions in non-aqueous solutions.	30
2.5	Viscosity <i>B</i> -Coefficients in binary solvent mixtures	35
2.6	Protic solvent mixed with the Protic solvent	36
2.7	Protic solvent mixed with the aprotic solvent	38
2.8	Aprotic solvent mixed with an aprotic solvent	39
2.9	Activation Energy of viscous flow	41
2.10	Gibb's Free energy of viscous flow	42
2.11	Objectives	44

### Chapter 3

3.1	Material and Methods	47
3.1.1	Solvents	47
3.1.2	Salts	48
3.1.3	Density	48
3.1.4	Viscosity	49

### Chapter 4

4.1	Results & Discussion	53
4.2	Viscosity measurements of electrolytic solutions	55
4.3	Ionic <i>B</i> -Coefficients	88
4.4	Viscosity and Activation Energy for viscous flow	95
4.5	Free energy of activation for viscous flow	99
4.6	Conclusion	101
4.7	Future Plan	103
	Figures	104
	References	135
