

Table of Contents

Chapter 1

Introduction

1.1	Immunosensors:	1
1.2	Components of immunosensor:	1
1.2.1	Electrochemical immunosensor:	2
1.2.2	Optical immunosensor:	4
1.2.3	Piezoelectric immunosensor	5
1.3	Types of immunosensors	6
1.3.1	Labeled detection:	7
	a. Direct ELISA	7
	b. Indirect ELISA	8
	c. Sandwich ELISA	8
1.3.2	Label-free detection	8
1.3.3	Comparison of labeled and label free detection	9
1.4	Thesis objective	11
1.5	Thesis overview	12
1.6	Summary	12
1.7	References	12

Chapter 2

Classification of cancer biomarkers and detection

2.1	Cancer biomarkers	16
-----	-------------------	----

2.2	Classification of biomarkers		
		17	
2.2.1	Biomarkers based on disease state	17	
2.2.2	Biomarkers based on biomolecules		19
2.3	Immunosensors for biomarkers detection		
		20	
2.4	Current Challenges in Protein Biomarkers		
		21	
2.4.1	Key challenges of protein based biomarkers		
		21	
2.4.2	Currently used protein biomarkers		23
2.4.3	Controversy with PSA		23
2.5	Supporting matrix for immunosensors		
		23	
2.6	Types of supporting matrix		
		21	
2.6.1	Self assembled monolayer (SAM)	23	
	a. Formation of SAM		24
	b. Conditions affecting the formation of SAM		25
	c. Agglomeration of the SAM		25
	d. Effect of annealing on SAM		26
2.6.2	Gold nanoparticles (GNP)	26	
	a. Gold nanoparticles for labeling		27
	b. Gold nanoparticles as a heat source		27
	c. Gold nanoparticles for drug delivery		27

d. Gold nanoparticles for sensor applications		28
2.6.3 Polymer brush	29	
a. Types of polymer brushes		30
b. Synthesis of polymer brushes		30
2.7 Summary		31
2.8 References		31

Chapter 3

Fabrication and characterization techniques

3.1 Formation of self assembled monolayers		37
3.1.1 Preparation procedure	37	
a. Deposition of gold		37
b. Self assembled monolayer (SAM) preparation		37
c. Sample details		38
3.2 Synthesis of electrochemical immunosensor		39
3.2.1 Electrodeposition of Au nanostructures		39
3.2.2 Immunosensor preparation for CEA detection	40	
a. Sample details		40
3.2.3 Immunosensor preparation for PSA detection	41	
a. Details of sample		42
3.3 Characterization		43
3.3.1 Atomic Force Microscopy (AFM)		43

3.3.2	Field emission scanning electron Microscopy (FESEM)	45
3.3.3	Zeta Potential measurements	45
3.3.4	Electrochemical impedance Spectroscopy (EIS)	46
	a.	Impedance spectroscopy 46
	b.	Equivalent circuits and z-view software 47
	c.	Cyclic voltammetry (CV) 48
	d.	Differential pulse voltammetry (DPV) 49
3.4	Summary	50
3.5	References	51

Chapter 4

Adhesion and elastic properties of multi layered SAM

4.1	Self assembled monolayers (SAM)	52
4.1.1	Heat treatment of self assembled monolayers	53
4.1.2	Force distance curve ($f-d$) features	54
4.2	Experiments: Synthesis and characterization	55
4.3	Results and Discussions	57
4.3.1	AFM analysis: Surface morphology	57
4.3.2	Growth of island	61
4.3.3	Force–distance ($f - d$) spectroscopy	62
4.3.4	Extraction of elastic modulus	67
4.4	Conclusions	68

4.5	References	70
-----	------------	----

Chapter 5

Effect of Au nanostructure morphologies on CEA detection

5.1	Introduction	72
5.1.1	Importance of Au nanostructures	72
5.1.2	Effect of size and shape of Au nanostructures	73
5.1.3	Electrochemical sensing of Au nanoparticles	73
5.2	Experiment	74
5.3	Optimization of synthesis parameter	75
5.3.1	pH response of buffer	75
5.3.2	Effect of incubation time	76
5.4	Results and discussions	77
5.4.1	Morphology of Au nanostructures	77
5.4.2	Electrochemical behavior of Au nanostructured electrodes	80
5.4.3	Morphology dependent response of nanostructures	82
5.4.4	Analytical performance of immunosensor	84
5.4.4.1	Electrochemical response	84
5.4.4.2	CEA Detection	85
5.4.4.3	Effect of surface area on sensitivity of immunosensor	87
5.4.4.4	Association constant	88

5.4.4.5	Selectivity of immunosensor	91
5.4.4.6	Stability of immunosensor	92
5.5	Summary	93
5.6	Reference	94

Chapter 6

Lable-free sandwiched immunosensor

6.1	Polymer brush for immunosensor	96
6.1.1	Types of polymer brushes	96
a.	Homopolymer brush	96
b.	Co-polymer brushes	97
6.1.2	Synthesis approach for co-polymer brushes	100
6.2	Experimental	100
6.2.1	Silica nanoparticles preparation	101
6.2.2	Modification of silica nanoparticles	101
6.3	Different conditions for immunosensor preparation	102
6.3.1	Brush thickness	102
6.3.2	Concentration of PSA antibody	104
6.3.3	pH of solution	105
6.3.4	Effect of AuNS on polymer brush growth	106
6.4	Results and Discussions	108

6.4.1	Characterization of conjugated SiNPs	108
6.4.2	Electrochemical measurements of prepared electrode	111
6.4.3	Analytical performance of immunosensor	115
6.4.3.1	Electrochemical impedance study	115
6.4.3.2	Dynamic range	118
6.4.3.3	Detection performance of the immunosensor	120
6.4.3.4	Selectivity of the immunosensor	121
6.4.3.5	Reproducibility of the immunosensor	122
6.5	Conclusions	123
6.6	References	123

Chapter 7

Conclusions and future work

7.1	Conclusions	127
7.2	Future work	128
